

Mikeal Kanouff Bio

Mikeal Kanouff is Washington Area Operations Manager at McClone Construction. He has been a driving force in advancing construction analytics for McClone Construction and a sounding board for ProNovos, the Atlanta-based construction data analytics firm.

Based in El Dorado Hills., Calif., McClone Construction was founded in 1975 and specializes in structural concrete and concrete formwork. With additional offices in Hawaii, Colorado, Texas (Central and South) and Washington, the company has completed well over 1,000 projects across the United States. A native of Washington, Kanouff started with McClone as an estimator in 2007. He was promoted to Senior Estimator and Project Manager positions prior to taking on his present-day role as Operations Manager in 2018.

That same year, Kanouff began working with ProNovos as part of a project to implement the startup's data analytics platform at McClone. The goal was to leverage data-driven bidding and project prioritization; higher-resolution personnel data; more efficient equipment-tracking; and in-depth construction data analytics. Over the past two years, Kanouff has worked directly with ProNovos' chief data scientist and software engineers to further enhance a wide array of solutions for self-performing contractors nationwide.
